DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3 rejected under 35 U.S.C. 103(a) as being unpatentable over Nisan, "Bidding and Allocation in Combinatorial Auctions

Re claim 1. Nisan discloses identifying a cost-minimizing bid set for reverse combinatorial auctions where all-or-nothing bids are allowed, receiving a plurality of bids, each bid having a timestamp, a bid price (see Abstract) and item information identifying at least one bid item; introducing a decision variable for each bid;

introducing a counting variable to indicate whether bids from a supplier are chosen in an optimal bid set;

modeling demand constraints for each item using the decision variable for each bid;

modeling minimum and maximum numbers of suppliers based on the counting variables;

introducing dummy bids, based on said modeled demand constraints, to ensure computability of a cost-minimizing bid set meeting said modeled demand constraints;

formulating an objective of choosing bids that arrive early, for a given cost, based on an additional time-stamped objective with the given cost level as a constraint;

introducing price modifications to at least one of said bid's respective item information and adjusting, based on said price modifications, the formulated objective of choosing bids that arrive early, and

generating a winner of the reverse combinatorial auction, by selecting the cost-minimizing bid set from among said plurality of bids, the selecting

based on said time stamps, said bid prices, said item information, said formulated objective of choosing bids that arrive early, and said modeled demand constraints (see Abstract, sect 1.2 Basic issues in Combinatorial Auctions, 2. The Model. 3.6 Bidding Languages and Polynomial Time Computation, etc.)
